nanpa-linja-n cheat sheet

OVERVIEW nanpa-linja-n is a reversible notation for exact decimal digit sequences. It encodes numbers as proper names and, in sitelen pona, as numeric cartouches.

It adds no Toki Pona words. This sheet shows the preferred digit syllables and the abbreviated glyphs used inside numeric cartouches.

DIGITS

digit	syllable	full sitelen	abbreviated sitelen
0	ni		
1	wa		
2	tu		
3	se		
4	na		
5	lu		
6	nu		
7	mu		
8	pi		
9	jo		

NUMERIC PUNCTUATION

description	split 'words'	full sitelen	abbreviated sitelen
Starting nanpa-linja-n	Ne-		
positive	ne		
negative	no		
decimal point	-n One		
ISO thousands	-n Eke		
percentage	-n Oke		
scientific notation	-n Eko		
fraction	-n Ono		
mixed fraction	-n Oko		
date	-n Eke		
time	-n Eke		
spacer (optional)	-n Ene		
Ending nanpa-linja-n	-n		

RULE **Ne- + digit syllable(s) and punctuation marker(s) + -n**

To build a proper name, use one preferred syllable per digit and one punctuation 'word' per punctuation marker. A proper name may split into multiple 'words' at punctuation to aid speaking and communication. The proper name maps directly to a full sitelen numeric cartouche. The full sitelen numeric cartouche may then be abbreviated for a clearer number presentation. Explicit + uses ne; - uses no; unsigned values use neither.

EXAMPLES — Abbreviated Numeric Cartouches

use	value	proper name	abbreviated numeric cartouche
integer	**125**	**Newatulun**	
positive	**+89**	**Nene Pijon**	
negative	**-3**	**Neno Sen**	
decimal	**0.5**	**Nenin One Lun**	
thousands	**4,321**	**Nenan Eke Setuwan**	
percentage	**67%**	**Nenumun Oken**	
scientific notation	**9.8e-3**	**Nejon One Pin Eko Nosen**	
fraction	**1/2**	**Newan Ono Tun**	
mixed fraction	**9¾**	**Nejon Oko Sen Ono Nan**	
date	**2026-07-18**	**Netunitunun Eke Nimun Eke Wapin**	
time	**06:30**	**Neninun Eke Senin**	
telephone	**+1-432-555-6789**	**Nene Wan Ene Nasetun Ene Lululun Ene Numupijon**	
leading zeros	**007**	**Neninimun**	

Companion-font glyph sizes inside numeric cartouches: 1/4 nanpa, nena, e, ala, ike, uta, open; 1/3 kasi; 1/2 kala; 2/3 ona, o, kulupu, kipisi, kin, en.

nanpa-linja-n cheat sheet - experimental formats

EXPERIMENTAL FORMATS Hexadecimal adds A-F with dedicated syllables and sitelen pona words. Nanpa, Nasa and Noka explicitly mark the numeric base.
Binary ASCII input begins with lowercase 0b and contains only the digits 0 and 1.

HEX DIGITS

digit	syllable	sitelen word	full sitelen
A	ja	jan	
B	la	lawa	
C	ma	mani	
D	pa	pan	
E	sa	sama	
F	ta	tan	

FORMAT RULES

Nanpa format: Decimal digits 0-9 use Nanpa as the explicit decimal frame.

Nasa format: Hexadecimal digits 0-9 and A-F use Nasa as the explicit hexadecimal frame.

Noka format: Binary digits 0 and 1 use Noka as the explicit binary frame; ASCII starts with 0b.

Separators: Explicit :, - and . become Ene. Hex and binary have no automatic Eke breaks.

HEX EXAMPLE - NO AUTOMATIC BREAKS

#FEDCBA **Nasa Tasapamalajan**

All A-F syllables end in a: ja, la, ma, pa, sa, ta.

No automatic Eke; separators appear only when explicit.

Explicit separators = Ene; no automatic Eke breaks.

BINARY EXAMPLE

0b101

Noka Waniwan

nanpa-linja-n cheat sheet - date and time

DATE AND TIME

Absolute positions use the unit as the numeric head (Sike / Mun / Suno / Ilo / Meso / Lili).

Unanchored durations use ordinary time-unit words with a Nanpa cartouche. Date = Suno; clock = Tenpo; Unix seconds = Sitelen.

CALENDAR DATES

The head denotes a calendar position; all numeric cartouches close with nanpa.

Full Gregorian date	tenpo Suno Tunitunun Eke Wawan Eke Nitun
Yearless (any year)	tenpo Suno Wawan Eke Nilun
Year 2026	tenpo Sike Tunitunun
Month 11	tenpo Mun Wawan
Day 5 of month	tenpo Suno Lun

WEEKDAYS (MONDAY FIRST)

Ordinary Toki Pona glyphs, not quantities; Monday begins the week.

Monday	tenpo suno mun
Tuesday	tenpo suno seli
Wednesday	tenpo suno telo
Thursday	tenpo suno kasi
Friday	tenpo suno kiwen
Saturday	tenpo suno ma
Sunday	tenpo suno suno

YEARS / MONTHS / DAYS: ORDINALS AND DURATIONS

Ordinals identify numbered positions relative to a reference; durations are unanchored quantities with a Nanpa head.

5 years (duration)	tenpo sike Nanpa Lun
5th year (relative)	tenpo sike nanpa Nanpa Lun
3 months (duration)	tenpo mun Nanpa Sen
3rd month (relative)	tenpo mun nanpa Nanpa Sen
5 days (duration)	tenpo suno Nanpa Lun
5th day (relative)	tenpo suno nanpa Nanpa Lun

SUBSECOND DURATIONS AND SCIENTIFIC NOTATION

1 ms = 10^-3 s; 1 µs = 10^-6 s; 1 ns = 10^-9 s. Both 0.345 s and 345 × 0.001 s mean 345 ms; the second combines two separate Nanpa numbers.

1 ms = 10^-3 s	tenpo lili Nanpa Wan Eko Nosen
1 µs = 10^-6 s	tenpo lili Nanpa Wan Eko Nonun
1 ns = 10^-9 s	tenpo lili Nanpa Wan Eko Nojon
3.45 seconds	tenpo lili Nanpa Sen One Nalun
345 ms = 0.345 s	tenpo lili Nanpa Sen One Nalun Eko Nowan
345 × 0.001 s = 345 ms	tenpo Nanpa Senalun lili Nanpa Wan Eko Nosen

HOURS, MINUTES AND SECONDS

Ilo = hour, Meso = minute, Lili = second. Unit head = position; unit word + Nanpa = duration.

Hour 02 (absolute)	tenpo Ilo Tun
2 hours (duration)	tenpo ilo Nanpa Tun
2nd hour (relative)	tenpo ilo nanpa Nanpa Tun
Minute 05 (absolute)	tenpo Meso Lun
5 minutes (duration)	tenpo meso Nanpa Lun
5th minute (relative)	tenpo meso nanpa Nanpa Lun
Second 12 (absolute)	tenpo Lili Watun
12 seconds (duration)	tenpo lili Nanpa Watun
12th second (relative)	tenpo lili nanpa Nanpa Watun

EXACT CLOCK TIMES

Tenpo-headed cartouches encode full 24-hour clock time, with separators retained inside.

09:30	tenpo Tenpo Nijon Eke Senin
14:45	tenpo Tenpo Wanan Eke Nalun
14:45:32	tenpo Tenpo Wanan Eke Nalun Eke Setun
14:45:32.345	tenpo Tenpo Wanan Eke Nalun Eke Setun One Senalun

COMPLETE TIMESTAMPS

Local timestamp = date + time + signed UTC offset + IANA zone. Unix Sitelen = seconds since 1970-01-01 00:00:00 UTC.
