

nanpa-linja-n cheat sheet

OVERVIEW

nanpa-linja-n is a reversible notation for exact decimal digit sequences. It encodes numbers as proper names and, in sitelen pona, as numeric cartouches. It adds no Toki Pona words. This sheet shows the preferred digit syllables and the abbreviated glyphs used inside numeric cartouches.

DIGITS

digit	syllable	abbreviated glyph
0	ni	○
1	wa	1
2	tu	
3	se	❗
4	na	Λ
5	lu	↷
6	nu	✕
7	mu	⌋
8	pi	⌘
9	je	℄

NUMERIC PUNCTUATION

description	split words	abbreviated glyph
Starting nanpa-linja-n	Ne-	#
negative	no	↯
decimal point	-n One	◌!
ISO thousands	-n Eke	◌%
percentage	-n Oke-n	⌘%
scientific notation	-n Eko	∞
fraction	-n Ono	◌! ◌!
mixed fraction	-n Oko	!*
date	-n Eke	⌘
time	-n Eke	⌘
spacer (optional)	-n Ene	+
Ending nanpa-linja-n	-n	#

RULE

Ne- + digit syllable(s) and punctuation marker(s) + -n

Use one preferred syllable per digit. At punctuation, follow the split shown above; its initial n normally attaches to the preceding word, except negative no. An abbreviated numeric cartouche keeps the digit and punctuation glyphs between the starting and ending nanpa glyphs.

EXAMPLES - EACH ROW INCLUDES AN ABBREVIATED NANPA-LINJA-N NUMERIC CARTOUCHE

use	value	proper name	abbreviated numeric cartouche
